

DC(IV)

DC(IV)

NAME

dc - DC-11 communications interface

DESCRIPTION

The discussion of typewriter I/O given in *tty* (IV) applies to these devices.

The DC-11 typewriter interface operates at any of four speeds, independently settable for input and output. The speed is selected by the same encoding used by the *dh* (IV) device (enumerated in *stty* (II)); impossible speed changes are ignored.

BUGS

Although impossible speed changes are not attempted on the hardware, the software is quite willing to accept them and alter the software state of the device accordingly. Subsequent requests for the device's state (*gtty* (II)) provide an erroneous status.
